ASOR Syrian Heritage Initiative (SHI): Planning for Safeguarding Heritage Sites in Syria

NEA-PSHSS-14-001

Weekly Report 9 – October 6, 2014

Michael D. Danti, Cheikhmous Ali, Jesse Casana, and Kurt W. Prescott

Heritage Timeline

**October 5, 2014**

**October 3, 2014**

APSA posted photos from journalist Shady Hulwe showing the total destruction of the Khusruwiye Madrasa and Mosque and the damage to the Khan al-Shouna in the UNESCO World Heritage Site, Ancient City of Aleppo. SHI Incident Report SHI14-054.

**October 2, 2014**

APSA posted several photographs taken by Syrian journalist Shady Hulwe showing damage to the Hittite temple of the weather-god on the Aleppo Citadel in the UNESCO World Heritage Site, Ancient City of Aleppo. SHI Incident Report SHI14-039.

**October 1, 2014**

**September 30, 2014**

---

1 This report is based on research conducted by the “Syria Preservation Initiative: Planning for Safeguarding Heritage Sites in Syria.” Weekly reports reflect reporting from a variety of sources and may contain unverified material. As such, they should be treated as preliminary and subject to change.

September 26, 2014 The Washington Post published “How an ancient tomb is a fault line in Syria’s brutal civil war,” by Ishaan Tharoor detailing the events surrounding the Tomb of Suleyman Shah (1236 AD), a Turkish monument within Syria threatened by Islamic State.
Military and Political Context
During the reporting period, the primary theaters of military engagement and insurgent activity in Syria were:

1) Ayn al-Arab/Kobani, where a slow, steady advance by Islamic State (IS) threatens the town, despite ongoing U.S./Coalition airstrikes and stiff resistance from Kurdish YPG ground forces;

2) Deraa, where Opposition and Jubhat al-Nusra (JN) forces repeatedly clashed and rebel forces turned back a SARG offensive against Deir al-Adas;

3) U.S./Coalition airstrikes in the region of Deir ez-Zor, Raqqa, Hasaka, and Aleppo aimed at degrading IS tactical and logistical capabilities, command and control, and revenues from petroleum refineries.

4) Damascus, where SARG captured the Adra district of eastern Ghouta.

Since mid-September, we have seen something of a shift in the main operational theaters, with a decline in operations around Hama and central western Syria as well as a lull in Islamic State advances on the Deir ez-Zor Airbase. Concomitantly, there has been a surge in activity around Damascus, in Deraa Governate, and in northwestern Syria. Analysts interpret a recent wave of assassinations and attempted assassinations directed at rebel leaders across western Syria as ultimately benefitting JN, IS, and SARG and undermining the Syrian Opposition and other rebel and insurgent groups. No single group appears responsible for these attacks, but the benefits for JN and IS tentatively implicate these extremists — these same extremists may be benefitting from negative public opinion in Syria against U.S./Coalition airstrikes.

With regard to cultural heritage, the fast-evolving situation poses several challenges for monitoring, assessment, mitigation, and preservation efforts.

Key Heritage Recommendations and Actions

1) The conflict's increasing scope requires concomitant increases in incident monitoring, verification, and assessment.

* SHI is adding capacity to monitor, evaluate, and report on Syrian cultural heritage and will be expanding its efforts to include northern Iraq.

2) The heightened complexity of the conflict — characterized by constantly shifting arrays of extremist groups, highly fluid alliances between the combatants specific to operational theaters, and rapidly evolving power structures — introduces a high degree of ambiguity and uncertainty to the determination of control of terrain at any given time, assessing the veracity and motives of in-country and expatriate sources, and ascribing heritage incidents to specific agents.

---

2 For coverage of weekly events see Cafarella, Jennifer. *Syria Update September 24–October 2, 2014* (Institute for the Study of War).
*SHI’s remote sensing/GIS team, headed by SHI Co-Directors Dr. Scott Branting and Dr. Jesse Casana, is working to gain access to additional geospatial datasets to increase our ability to provide timely and accurate information. In this same vein, SHI is expanding its network of in-country and expatriate Syrian sources to incorporate multiple perspectives, lower time to incident verification/debunking, and improve geographic coverage.

3) The effects of increased airstrikes on heritage remains to be determined, but the potential for collateral damage must be incorporated into weekly monitoring efforts over a large geographic area.

* See actions/recommendations related to No. 2 above.

**Widespread Looting and Destruction Across Syria**

Preliminary results of analyses conducted by SHI Co-Director Dr. Jesse Casana and his team at the University of Arkansas show widespread looting and conflict-related damage and destruction across Syria. In a sample of 100 well-known archaeological sites, Casana identified **looting in at least 24% of the sample** (minor 8%, moderate 5%, severe 11%) and other damage, such as military earthworks or recent construction, at **27% of sites**. SHI is producing Incident Reports for all these locations. **We provide 10 Incident Reports (SHI 14-043 to SHI 14-053) on major sites with evidence of looting and/or damage in this report**, including Mari, Tell Sheikh Hamad, Qalaat al-Shmemes, Tell Leilan, Tell Mohammad Diab, Tell Hamidiya, Tell Badaye, Tell Shair, Tell Shioukh Tahtani, and Tell Bia.

**Prioritized Monitoring List**

The ASOR SHI developed a prioritized site list for monitoring, threat assessment, geospatial data acquisition, and compiling documentation. Inclusion in this list stems from an assessment of site significance, threat level, damage assessment, and current trends in the Syrian conflict. In order of prioritization, the list includes Apamea, Dura-Europus, Palmyra, Aleppo, Serjilla, Ebla, Mari, St. Simeon, and Raqqa.

**Algherbal Coverage of Syrian Heritage Issues**

As reported by SHI member Dr. Chiekhmous Ali and SHI Co-Director Dr. Abdulrazzaq Moaz, the magazine *Algherbal* [http://www.algherbal.com](http://www.algherbal.com) has published a number of informative and timely articles on Syrian heritage. Most recently, two articles covered:

Previous volumes have included articles on:

- Shinsharah (Khirbet Hass), Dead Cities in *Algherbal* 17: 16–17. [http://www.algherbal.com/2013/10/12/1120/](http://www.algherbal.com/2013/10/12/1120/)

• A two part article entitled "Syrian archaeological heritage has become a hostage: How can we protect it?"
Incident Reports

SHI 14-039

Report Date: October 3, 2014

Site Name: Hittite Temple of the Weather God, UNESCO WHS, Ancient City of Aleppo

Date of Incident: Prior to October 2, 2014

Location: Aleppo Citadel

Coordinates: Lat. 36.19947, Lon. 37.1626

Site Description: This temple of the storm-god Adda lies immediately west of the outdoor theater and north of the Ayyubid Palace. The temple was discovered by a joint Syrian-German excavation (1996–2009) headed by Kay Kohlmeyer (Berlin University of Applied Sciences), and is best known for its Neo-Hittite basalt sculptures.

Site Date: Early Bronze Age to Early Iron Age (9th century BC) with Hellenistic disturbance

Source of Destruction: Reportedly rocket fire and likely also neglect during the conflict. The steel roof protecting the excavated remains has collapsed and the sculptures are exposed. The site is beginning to disintegrate.

Pattern: Urban combat in the UNESCO WHS, Ancient City of Aleppo.

Monitoring Recommendations and Mitigation Measures: Monitoring is ongoing given this is a SHI high priority site. Mitigation is inadvisable until combat in this area abates.

Before and after images of the Temple to the Storm God in Aleppo (APSA)
Report Date: October 3, 2014

Site Name: Great Umayyad Mosque, UNESCO WHS, Ancient City of Aleppo

Date of Incident: October 1, 2014

Location: Aleppo

Coordinates: Lat. 36.19931, Lon. 37.15687

Site Description: According to Ross Burns5,

The Great Mosque of Aleppo, with its vast expanse of paved courtyard surrounded by arcades, bears an initial resemblance to the Umayyad Mosque in Damascus. The resemblance is no superficial one, for the Aleppo Mosque too was founded by the Umayyads in 715, only ten years after the one in Damascus. It was also built in the courtyard of a Byzantine church, which in turn was probably on the site of a Roman temple temenos — again a similar pedigree to the Umayyad Mosque in Damascus. But there the resemblance ends, for the Great Mosque in Aleppo has been destroyed so repeatedly that only the plan survives of the original Umayyad building. Indeed the oldest part of it standing is probably the remarkable minaret [now destroyed], which dates from the Seljuk restoration of the mosque in 1090.

An architectural overview is also provided by Gaube and Wirth6,

Anfang des 8. Jahrhunderts errichtet, 962 durch die Byzantiner zerstört, bis 967 wieder aufgebaut, 1094 um das schöne, heute noch erhaltene Minarett bereichert, 1174 gründlich erneuert und im Südosten erweitert, vor 1290 mit den heutigen Deckengewölben versehen, die hölzerne Dächer ersetztet, und danach standing restauriert und verschönert, ist die Große Moschee das Heiligtum der Aleppiner Muslime.

Site Date: Early Islamic to modern era. Founded 715 AD.

Source of Destruction: Fire related to urban combat.

Pattern: Urban combat in the UNESCO WHS, Ancient City of Aleppo.

Monitoring Recommendations and Mitigation Measures: Monitoring is ongoing given this is a SHI high priority site. Mitigation is inadvisable until combat in this area abates.

Image of the Great Umayyad Mosque in Aleppo burning (APSA)
**SHI 14-041**

**Report Date:** October 1, 2014

**Site Name:** Ma’arrat al-Numan Museum

**Date of Incident:** Unspecified

**Location:** More specifically the Ma’arrat al-Numan Museum in the Khan Murad Pasha

**Coordinates:** 35°38'57.50"N, 36°40'47.35"E

**Site Description:** According to Ross Burns,

[The Maarat al-Numan Museum] contains an interesting collection of objects including mosaics and pottery from many periods...The mosaics have been transferred from nearby sites including a fifth century mosaic from as far as Homs...

In the centre of the courtyard is a *tekkîye* or foundation for the instruction of initiates to the Dervish sect. A doorway to the left once led to the hammam and suq attached to the khan (now managed separately). Opposite the museum is another Ottoman khan, the Khan Assad Pasha al-Azem.

**Site Date:** Early 16th century

**Source of Destruction:** The APSA report (which includes a video and numerous photos) describes heavy damage to the museum, which it attributes to daily and massive aerial bombardments. The adjacent museum (Khan al-Qashlah) was allegedly converted into a military retrenchment by the official army until August 2011, whereupon the free army assumed control of the complex, which remains the case today.

The APSA report claims that a MIG dropped a bomb near the museum in early October 2012, resulting in shattered doors, windows, display cases, and earthenware objects. Some of the mosaic panels on the building have suffered bullet damage, while other panels exhibit more severe destruction.

The APSA report also describes potential looting of the museum, including approximately thirty coins, jars, terracotta figurines, glass vases, and a variety of small objects dating to the Islamic Period (the museum director is cited as the source here). There are unconfirmed reports that Turkish police near Antioch have confiscated items that were looted from Ma’arrat al-Nu’man.

**Pattern:** Urban warfare in the area of this museum. See also SHI Incident Report SHI14-016.

---

**Monitoring Recommendations and Mitigation Measures:** Mitigation would be feasible and cost effective if combat has abated in the town and the security situation permits. Measures could be taken to protect the mosaics and other fixed, large exhibits in the museum as well as important architectural elements within the khan.

SHI 14-042

Report Date: October 1, 2014

Site Name: Ancient City of Bosra

Date of Incident: Unspecified

Location: Bosra, 140 kilometers south of Damascus, Daraa Governorate

Coordinates: Lat. 32.518406°, Lon. 36.482017°

Site Description: See individual entries. For a general introduction consult the UNESCO WHS website http://whc.unesco.org/en/list/22.

Site Date: Bosra dates to primarily to the Nabataean, Roman, Byzantine, Islamic Periods

Source of Destruction: The DGAM were able to assess damage in several historical buildings in the Ancient City of Bosra:

- **Mabrak Mosque, Bosra** (Lat. 32.52285, Lon. 36.48697) — Several stones have collapsed on the eastern part. See SHI Weekly Report 8.

- **Al-Omari Mosque** (Lat. 32.52156, Lon. 36.4829) — The Minarets of the mosque have been damaged, while minor damage also appeared in the artificial zinc roof, walls, and floors. Several stones in the east area arch were destroyed. See SHI Weekly Report 8.

- **Bab al Hawa** – Temporary block walls were built in front of the western façade and in the western gate of the old city. The DGAM also reports vandalism and graffiti on the ancient walls.

Pattern: Urban warfare.

Monitoring Recommendations and Mitigation Measures: Fighting in the south of Syria has been particularly heavy and well documented in international media, much like Aleppo in the north. SHI has prioritized ancient Bosra for monitoring and evaluation.
