

LCP-AIAR Workshop 1 Feb. 2018 – Notes for follow-up

Andrea

- Add Hebron to name of Kiln 2291
- petro-fabric **7**: change name to Calcareous/Upper Cretaceous formiferous/**rendzina soil**
- petro-fabric **24**: change name to Calcareous/formiferous/**rendzina soil**
- move Beit Nattif figurine from petro-fabric #71 to petro-fabric #24
- remove petro-fabric #71: Rendzina soil from site

Anat

- petro-fabric **23**: [Basaltic soil](#): send Andrea text from presentation to add to General Information + add vessels and samples from Tel Dan?
- petro-fabrics **32**: [Moza clay](#) and #36: [Moza clay/Aminadav sand-sized dolomite crystals](#): add text to General information to explain what is similar, and what is the difference between these two.

Paula & Anastasia

- northern coastal fabrics **17-20**: should these be combined or kept separate? P & A will meet with Andrea and Barak to discuss

Who?

- Should add under the About tab:
 - explanation of the LCP's naming conventions for petro-fabrics
 - overview statement about petrography and petro-fabrics: methodology, best practices, cautions
 - a statement about petro-fabrics of Israel, similar to that written by Mary Ownby and Lisa Peloschek for Egypt. Theirs is currently included in the General Information box for [Nile Silt](#) and [Egyptian marl/mixed clays](#), but it could be moved, or added to, a growing document about petrography in the Levant, divided into regional groups

Desiderata

- need comment field for specific observations, individual contributor comments, questions etc.
- need ability to add more documentation to petro-fabrics, such as geological maps, photographs of soil profiles, etc. Should be a new text field that allows attachments.
- need new submission category: "Raw material." This would allow many petro-fabrics to be associated with a single raw material. This should also have the ability to add more documentation, photos, etc.

Student Comments

- General Information should be a summary overview, not individual site information
- would like general statements that clarify what is known vs. unknown – and why (the addition of an overview statement about petrography in Israel could address this)
